

Augmented Data Quality

Transform your data landscape with our innovative, AI-driven data quality solution for next-generation enterprises.

Connect to Data

Flexible and customisable connectivity to any data source or data store, and lineage, catalog and governance tools.

Profile Data

Advanced techniques to identify relationships, outliers / data errors.

AI Rule Suggestion

NLP model to match data to DQ rules within a curated rule library to reduce / reuse manual effort of building rules.

Configure Controls

User-friendly GUI to configure Data Quality controls.

“Excellent DQ software that objectively assesses DQ to help facilitate improvement.”

– Gartner Peer Insights review

Measure Data Health

Data quality metrics dashboards tailored for user groups / types. Aggregated views for senior-level oversight.

Alerts & Remediations

Alert data owners to business-critical data quality breaks and enable users to suggest corrections.

AI Powered Insights

Dynamic view of DQ issues and remediations. Trend analysis for predictive breaks and remediations.

Return on Investment

Customisable metrics designed around your critical data elements to demonstrate return on investment for DQ initiatives.
